

Name: Miguel Antonio Logarta Student ID: 923062683
 Term: Fall 2023 Date: 11/29/2023 Team Name: Byte Builders

Name (Include yourself in #1)		Contribution (1 low, 5 High)	Knowledge (1 little, 5 lot)	Engagement (1 none, 5 enthusiastic)	Communication (1 none, 5 constant)
1	Miguel Antonio Logarta	5	5	5	5
2	Mohammed Deeb	5	5	4	5
3	Abdarrahman Ayyaz	4	4	4	4
4	Avitaj Singh Bhangoo	4	3	4	3
5					

Regarding You

What did you get out of the project?

What I got out of the project was a better understanding of how a file system works. I now have a greater knowledge of how the FAT file system works, as well as how we can format the partition for our needs.

What did you struggle with?

I struggled trying to format the partition and also read data from the volume. Since we were using a FAT file system, our program needed the ability to read multiple blocks of memory that could be fragmented in the volume.

Our team also had communication issues. We all had different class times and sometimes we would be unavailable because of work. It made it difficult to try to get together at the same time to work on the project. Because of this issue, we had to teach each other how our file system worked for each member separately. It led to a lot of wasted time since we weren't all on the same page. We also had to wait for each other to finish each feature which led to some delays.

What was easy for you?

This was a very difficult project. A lot of the difficulty came from trying to translate the concept into actual code. A lot of the functions that we also tried to work on were tightly coupled to other functions that weren't implemented yet. Writing test files did help, but it was still difficult.
